sequence search

Hi! I'd like to request the following sequence search for case 09/762,594 (please also include the pending databases):

- 1. the nucleic acid sequence of SEQ ID NO: 2
- 2. the nucleic acid sequence encoding the protein of SEQ ID NO: 7

Thanks!

Bridget Bunner

Art Unit 1647 Rem 4C65 (571) 272-0881 mailbox 4C70

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
        The invention provides isolated peripheral-type benzodiazepine receptor

(PBR) associated proteins (PAPB) and nucleic acids encoding the PAP

proteins. The PAP polynucleotides are a source of primers and probes for

detection, isolation and amplification. PAP ligands or substrates or

antibodies can be labeled and used to detect PAPB, in the diagnosis and

prognosis of disease associated with increased cell proliferation, such

as cancer, or reduced cell death. The diagnostic methods of the invention

can be predictive of diseases involving PBR including gallstones,

atherosclerosis, Niemann-Pick C, Sitosterolemia, Dystrophy, tumor

proliferation, Schnyder's corneal crystalline dystrophy, brain disorders

including Alzheimer's disease, cholesterol methodism, Tellurium

toxicity, Smith-Lemli-Opitz syndrome, myelinization, developmental

conscity, Smith-Lemli-Opitz syndrome, myelinization, developmental

conscity, Smith-Lemli-Opitz syndrome, or in screening for compounds

cuseful in prophylactic treatment, or in screening for compounds

effective in prophylactive treatment. The PAPS may be used to identify

capents which modulate PBR activity. Inhibitors of PAP may be used in the

treatment or amelloration of conditions such as stress and stroke,

cancer, neurodegenerative disorders, developmental and stroke,

cancer, or neurodegenerative disorders, developmental and stroke,

cancer, neurodegenerative disorders, developmental and stroke,

cancer, neurodegenerative disorders, developmental and stroke,

```

The invention Figures to an isolated, purilled or recombinant complex (1) comprising a PoSH polypeptide and a PoSH-associated protein (PoSH-AP) (a) or HERPUDI and a Ubiquitin ligase (b). Methods using (1), (a) or (b) are useful for identifying an agent that modulates an activity of a PoSH polypeptide or POSH-AP, for identifying an antiviral agent, an anti-apportit agent, an anti-cancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the progression of a neurological disorder, an agent that modulates a PoSH function, an agent that modulates a PoSH cured for treating a viral infection, for inhibiting an activity of a PoSH-associated disease is viral infection, PoSH-associated cancer or PoSH-associated disease is viral infection, PoSH-associated cancer or treating or preventing PoSH-associated meriodical disorder. The methods are useful for treating or preventing PoSH-associated meurological disorder. The methods are useful for treating or preventing PoSH-associated meurological disorder in a subject corresponds to a chizophrenia, Neimann-Pick's disease, Huntington's disease, and sease, Parkinson's disease, Huntington's disease, and sease, Parkinson's disease, This sequence corresponds to a Isolated, purified or recombinant complex, useful for identifying an antiviral, anti-apoptotic or anti-cancer, comprising POSH polypeptide and POSH-associated protein (POSH-AP). invention relates to an isolated, purified or recombinant complex (1) vrising a POSH polypeptide and a POSH-associated protein (POSH-AP) (a) ŝ Tuvia neurological disorder progression disorder; Alzheimer's disease; Parkinson's disease; Huntington's disease; schizophrenia; Niemann-Pick's disease. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity tissue growth factor activity, immunomodulatory activity and activinhinhibin activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               useful

```

```
The invention relates to an isolated, purified or recombinant complex (I) comprising a POSH polypeptide and a POSH-associated protein (POSH-AP) (a) or HERPUDI and a Ubiquitin ligase (b). Methods using (I), (a) or (b) are useful for identifying an agent that modulates an activity of a POSH polypeptide or POSH-AP, for identifying an antiviral agent, an anticancer agent, an anti-cancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the progression of a neurological disorder, an agent that inhibits the progression of a neurological disorder, an agent that inhibits can be used for treating a viral infection, for inhibiting an activity of a POSH-associated disease is viral infection, for inhibiting an activity of a POSH-associated disease is viral infection, POSH-associated cancer or POSH-associated disease is viral infection, POSH-associated cancer or treating or preventing POSH-associated neurological disorder in a subject treating or preventing POSH-associated neurological disorder in a subject c. c.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, Schizophrenia, Niemann-Pick's disease. This sequence corresponds to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated, purified or recombinant complex, useful for identifying an antiviral, anti-apoptotic or anti-cancer, comprising POSH polypeptide and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     336

The invention relates to an isolated, purified or recombinant complex (I) comprising a POSH polypeptide and a POSH-associated protein (POSH-AP) (a) or HERPUDI and a Ubiquitin ligase (b). Methods using (I), (a) or (b) are useful for identifying an agent that modulates an activity of a POSH polypeptide or POSH-AP, for identifying an antiviral agent, an anticancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the progression of a neurological disorder, an agent that inhibits the progression of a neurological disorder, an agent that modulates a POSH cused for treating a viral infection, for inhibiting an activity of a POSH-associated disease is viral infection, for inhibiting an activity of a POSH-associated disease is viral infection, POSH-associated cancer or POSH-associated neurological disorder. The methods are useful for treating or preventing POSH-associated neurological disorder in a subject treating or preventing POSH-associated neurological disorder in a subject end of the post parkinson's disease, Huntington's disease, solizophrenia, Niemann-Pick's disease. This sequence corresponds to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and

                                                                                                                                                                                                                                                                                                       The invention relates to an isolated, purified or recombinant complex (I) comprising a PoSH polypeptide and a PoSH-associated protein (PoSH-AP) (a) cor HERPUDI and a Ubiquitin ligase (b). Methods using (1), (a) or (b) are useful for identifying an agent that modulates an activity of a PoSH polypeptide or PoSH-AP, for identifying an antiviral agent, an anti-cancer agent, an antiviral agent, an anti-cancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the progression of a neurological disorder, an agent that inhibits the progression of a neurological disorder, an agent that modulates a PoSH cured for treating a viral infection, for inhibiting an activity of a PoSH-associated disease is viral infection, PoSH-associated cancer or PoSH-associated neurological disorder. The methods are useful for treating or preventing PoSH-associated neurological disorder in a subject treating or preventing PoSH-associated neurological disorder in a subject creating or preventing PoSH-associated neurological disorder in a subject end and the post of the

                                                                                                                                                                                                                                                                                                                                                                           Sequences AAZ87205-Z87210 represent cDNAs encoding six human neurotransmission-associated proteins (NTAPs, AAY7121-Y77126). The present sequence, clone 998868, encodes a benzodiazephne receptor-associated protein, and was produced by extension of cDNA fragments isolated from a human kidney tumour cDNA library. The NTAPs are used for treatment or prevention of neurological diseases (e.g., Alzheimer's, Parkinson's or Huntington's diseases, cerebral neoplasms, or multiple sclerosis). They can also be used to raise specific antibodies and to screen for specific binding agents (potential (agonists and antagonists). NTAP-encoding nucleic acids are useful for recombinant production of NTAPs, and as a source of therapeutic antagonists (antisense, triplexforming or ribozyme molecules). The nucleic acids may also be used as cource of probes and primers for diagnosis or monitoring of NTAP encosome mapping and for identifying related sequences, and for gene therapy. NTAP antagonists are used to treat and prevent a wide range of cancers and immune disorders (e.g. ALDS, asthma, Crohn's disease, osteoporosis, viral or other infections). NTAP antibodies are used to detect NTAPs, in competitive drug screens, and for affinity purification of NTAPs from natural sources
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             156
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    129

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated, purified or recombinant complex (I) comprising a POSH polypeptide and a POSH-associated protein (POSH-AP) (a) or HERRUDI and a Ubiquitin ligase (b). Methods using (I), (a) or (b) are useful for identifying an agent that modulates an activity of a POSH polypeptide or POSH-AP, for identifying an antiviral agent, an anti-appoptotic agent, an anti-cancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the

progression of a neurological disorder, an agent that modulates a POSH function, an agent that modulates a HERPUD1 function. The methods can be used for treating a viral infection, for inhibiting an activity of a POSH-AP in a cell, for treating a POSH-associated disease in a subject. The POSH-associated disease is viral infection, POSH-associated cancer or POSH-associated neurological disorder. The methods are useful for treating or preventing POSH-associated neurological disorder in a subject e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, schizophrenia, Niemann-Pick's disease. This sequence corresponds to a

The invention relates to an isolated, purified or recombinant complex (I) comprising a POSH polypeptide and a POSH-associated protein (POSH-AP) (a) or HERPUDI and a Ubiquith ligase (b). Methods using (I), (a) or (b) are useful for identifying an agent that modulates an activity of a POSH polypeptide or POSH-AP, for identifying an antiviral agent, an anti-cancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the progression of a neurological disorder, an agent that inhibits the progression of a neurological disorder, an agent that modulates a POSH function, an agent that modulates a HERPUDI function. The methods can be used for treating a viral infection, for inhibiting an activity of a POSH-associated disease is viral infection, POSH-associated cancer or POSH-associated neurological disorder. The methods are useful for treating POSH-associated meurological disorder in a subject ceg. Alzheimer's disease, Parkinson's disease, Huntington's disease, sollicable in a subject cellizophrenia, Niemann-Pick's disease. This sequence corresponds to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated, purified or recombinant complex, useful for identifying an antiviral, anti-apoptotic or anti-cancer, comprising POSH polypeptide and POSH-associated protein (POSH-AP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Tuvia S;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PROT-) PROTEOLOGICS INC
```

```
The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to ortokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, inmunomodulatory activity and activity, inmunomodulatory activity and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52581) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 395 GCATAAGCAAGTTCTTATGGGCCCCATATAATCCAGACACTTGTCCTGAGGTTGGATCTT 454
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cleic acids encoding polypeptides with cytokine-like activities, useful diagnosis and gene therapy.

comprising a PoSH polypeptide and a PoSH-associated protein (PoSH-AP) (a) or HERPUDI and a Ubiquitin ligase (b). Methods using (1), (a) or (b) are useful for identifying an agent that modulates an activity of a PoSH polypeptide or PoSH-AP, for identifying an autiviral agent, an anti-apoptotic agent, an anti-cancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the protein through the secretory pathway, an agent that inhibits the progression of a neurological disorder, an agent that modulates a PoSH function, an agent that modulates a PoSH consider for treating a viral infection, for inhibiting an activity of a PoSH-associated disease is viral infection, PoSH-associated cancer or PoSH-associated disease is viral infection, PoSH-associated cancer or treating or preventing PoSH-associated neurological disorder in a subject treating or preventing PoSH-associated neurological disorder in a subject e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, schizophrenia, Niemann-Pick's disease.
